Peddoddi Anitha : alluanjialluanji3@gmail.com

(1) Project Overview:-

A “CRM Jewelry Management project” aims to achieve several key objectives that ultimately contribute to the growth and efficiency of a jewelry business. The system specifically designed for jewelry business, allowing them To effectively track customer interactions, manage sales leads, and personalize marketing efforts optimize customer relationship and boost sales within the jewelry industry.

- Capture detailed customer information including demographics, purchase history, preferred jewelry types, special occasions, and contact details
- Store and update customer data in real time to maintain accuracy

The purpose of a CRM (Customer Relationship Management) system is to help businesses manage and improve their interactions with customers and potential customers. This overarching goal breaks down into several key objectives.

CRM, or Customer Relationship Management, is a multifaceted concept that's essential for modern businesses. It's not just a piece of software it's a strategic approach to how a company interacts with its customers.

The relationship between CRM (Customer Relationship Management) and CLV (Customer Lifetime Value) is very strong. CRM systems provide the tools and data necessary to effectively calculate, track, and ultimately increase CLV.

(2) Objectives :-

Business Goals :

The primary objectives of a Customer Relationship Management (CRM) system are to enhance customer satisfaction, increase sales, improve customer retention, and build strong customer loyalty by effectively managing customer interactions and data across all touchpoints, ultimately achieving business goals like increased revenue, market share, and profitability.

CRM (Customer Relationship Management) systems serve a variety of business goals, all designed to improve customer interactions and drive growth.

The four main objectives of a CRM

- ❖ Increase customer retention.
- ❖ Shorten the sales cycle.
- ❖ Increase sales.
- ❖ Decrease customer acquisition.

Specific outcomes :-

A CRM implementation for a jewelry business aims to drive tangible results through enhanced customer engagement and operational efficiency. There are unique considerations that will influence the specific outcomes and key deliveries.

(3) Salesforce Key Features and Concepts Utilized:-

Salesforce is a cloud-based CRM platform that provides various features and concepts to help businesses manage customer relationships, sales, and operations. Here are some key features and concepts utilized in Salesforce

- ❖ Key features of Salesforce CRM include: contact management, lead management, opportunity management, sales forecasting, reporting and dashboards, automation through workflows, collaboration tools, cloud-based access, mobile accessibility, AI integration, campaign management, and a single source of truth for customer data, allowing businesses to track and manage customer interactions across all channels effectively; with core concepts like lead qualification, opportunity stages, and customer lifecycle management central to the platform.
- ★ We used the following **Objects** :-
 - ❖ Jewel Customer
 - ❖ Items
 - ❖ Billing
 - ❖ Prices
 - ❖ Customer order
- ★ We used **Tabs** such as
 - ❖ Jewel Customer Tab
 - ❖ Item Tab .. Etc.

★ We Created a Lightning App :- Jewellery Inventory System

➤ We Created Fields such as :-

- ◆ ***Lookup Relationship***
- ◆ ***Master-Detailed Relationship***
- ◆ ***Text, Phone, Email Fields in Jewel Customer Object***
- ◆ ***Number Picklist Fields in Item Object***
- ◆ ***Currency Fields in Price Object***
- ◆ ***Formula Field (cross object)in Item Object***

- ♦ ***Also Created some other Fields.***

★Schema Builder:-

The schema builder is a simple graphical interface for visualizing and editing the data model of your Org. The schema builder can get all fields from an Object, perform basic impact analysis of changes to an Object, and show all dependencies on an Object.

→ We Entered object as :-

- ❖ Jewel Customer
- ❖ Items
- ❖ Customer order
- ❖ Prices
- ❖ Billing in Schema Builders

★Field Dependencies:-

Field dependency can refer to a cognitive style, a relationship between fields in a dialog, or a dependency injection technique. Field Dependencies are used to create relationships between fields within an object. They allow you to control the visibility and availability of fields based on the values selected in other fields.

We created New Field Dependencies, controlling as "Priority"& Depending Field as "Expecting Days of Return".

★Validation Rules :-

A validation rule is one way to restrict input in a table field or a control on a form. Validation text lets you provide a message to help users who input data that is not valid.

Created the validation rule for Postal Code field in Jewel Customer object.

★ Profiles:

We Created 2 Profiles:

- **Gold Smith profile**
- **Worker profile**

★ Roles:-

Salesforce roles are record-level access controls that define what data a user can see in Salesforce. roles can be used to determine the visibility access of the user and the data they can access in your Salesforce CRM organization.

Added Goldsmith role in CEO Role & Added Worker Role which reports to Goldsmith.

★ Users: -

A user in Salesforce is anyone who logs in to the platform, including employees, customers, partners, and automated users.

- ★ **Niklaus Mikaelson in Goldsmith Profile**
- ★ **Kol Mikaelson in Worker Profile**
- ★ **2 more Users in Worker Profile**

★ Page Layouts: -

Page layouts control the layout and organization of buttons, fields, s-controls, Visualforce, custom links, and related lists on object record pages. They also help determine which fields are visible, read only,

and required. Use page layouts to customize the content of record pages for your users.

Created 2 Page layouts in Item object named as: -

- ❖ “Page Layout for Gold”
- ❖ “Page layout for Silver”

★ Record Type: -

Record Types are a way of grouping many records of one type for that object. These can be applied to any standard or custom object, and allow you to have a different page layout, fields, required fields, and picklist values.

Created Record Types in Item Object labeled as Gold & Silver.

★ Permission sets: -

A permission set is a collection of settings and permissions that give users access to various tools and functions. Permission sets extend users' function.

We Created New Permission Sets & Labeled it as “Per to Worker “ And in Item Object we enabled Gold & Silver object permission we selected “Read, Edit & Create “. We added Assignments which we used under Worker Profile users.

★ User Adoption: -

User adoption, or onboarding, is the process of customers or new users getting used to a product or service and then deciding to keep using it because it makes a task or goal.

In Jewelry Inventory System we created Jewel Customers under Jewel Customer tab. We created some Records under “Item, Prices, Customer orders & Billing”.

★ Reports: -

Reports give you access to your Salesforce data. You can examine your Salesforce data in almost infinite combinations, display it in easy-to-understand formats, and share the resulting insights with others. Before building, reading, and sharing reports, review these reporting basics.

We created 3 reports:

- **Prices Report**
- **Billings with item and Customer order Report.**
- **Item with Billings Report**

★ Dashboards:

We created dashboards under “Item with Billings Report”, “Billings with item and Customer order Report”, “Prices Report”.

★ Flows:

Flow is a powerful tool that allows you to automate business processes, collect and update data, and guide users through a series of screens

We selected Record Triggered flow and “Selected the Object as a “Billing” in the Drop-down list. Selected the Trigger Flow where as “A record is Created or Updated”. Selected the Optimize the flow for: “Actions and Related Records”.

(4) Detailed steps to Solution Design: -

We created objects:

- ◆ Jewel customer
- ◆ Item
- ◆ Billings
- ◆ Prices
- ◆ Customer Order

Schema Builder: -

We created Schema Builders for Jewel Customer, Price, Item, Customer order & Billing.

The screenshot shows the Schema Builder interface in a web browser. The top navigation bar includes tabs for 'Document 1.docx' and 'Project Title CRM.docx'. The main area displays a graph of objects and their relationships. Objects shown include 'Billing', 'Price', 'Customer Order', 'Jewel Customer', and 'Recommendation'. Relationships are represented by colored lines: blue for Lookup Relationships, red for Master-Detail Relationships, and orange for Required Fields. A legend on the right side defines these colors. The bottom of the screen features the Windows taskbar with icons for File Explorer, Edge, Google Chrome, and File Explorer again.

Field Dependencies: -

We created Field Dependencies under Item objects

The screenshot shows the Salesforce Setup interface. On the left, there's a sidebar with various options like Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, etc. The main area is titled 'Items Field Dependencies'. It contains a table with one row: Action (Edit | Del), Controlling Field (Priority), Dependent Field (Expected Days Of Return), and Modified By (Kuruba Sirisha Team, 26/02/2025, 10:02 am). There's also a 'Help for this Page' link.

This screenshot shows the 'Edit Field Dependency' dialog. It has sections for 'Instructions' (with a legend for Excluded Value and Included Value) and two tables for 'Priority' and 'Expected Days Of Return'. The 'Priority' table has columns Low, Medium, High, and Critical. The 'Expected Days Of Return' table has columns 1-3 Days, 4-5 Days, 6-7 Days, 8-10 Days, 1-3 Days, 4-5 Days, 6-7 Days, and 8-10 Days. Buttons for Save, Cancel, and Preview are at the bottom.

Tabs:-

We created **Tabs** for Jewel Customer, Prices, Items, Billing & Customer Order.

The screenshot shows the Salesforce Setup interface under the User Interface category, specifically the Tabs section. The left sidebar has a search bar and a 'User Interface' section with 'Rename Tabs and Labels' and 'Tabs' selected. The main area is titled 'Custom Tabs' and contains three sections: 'Custom Object Tabs', 'Web Tabs', and 'Visualforce Tabs'. The 'Custom Object Tabs' section lists tabs for 'Billings', 'Items', 'Jewel Customers', 'Orders', and 'Prices', each with a small icon and a 'Tab Style' column. Below these sections are status messages: 'No Web Tabs have been defined' and 'No Visualforce Tabs have been defined'. The top navigation bar includes tabs for WhatsApp, Project Title CRM, and other Salesforce components like Tabs and Jewel Dashboard.

Flows:-

We created flows

The screenshot shows the Salesforce Flow Record list page. The top navigation bar includes tabs for WhatsApp, Project Title CRM, Recently Viewed, Flows, Flow Trigger Explorer, and Email Notifications. The main area displays a table for 'Recently Viewed' flows. The table columns are: Flow Label, Flow Type, Progress Status, Associated Record, Description, Last Modified Date, and Last Modified. There is one record listed: 'Email Notification Flow' (Record-Triggered After Save Flow), which is 'Activated'. The status bar at the bottom indicates the date as 03-03-2025 and the time as 06:56.

The screenshot shows the 'Email Notification Flow' details page in the Salesforce interface. The flow is named 'Email Notification Flow' and is of type 'Record—Run After Save'. It is associated with the 'Jewelry Inventory S...' object. The progress status is 'Activated' with a green button. The last modified date is '01/03/2025, 11:32 am' by 'Kuruba Sirisha Team'. The page includes tabs for 'Related' and 'Details', and a section for 'Information' containing fields like Flow Label, API Name, Flow Type, and various dates and times.

(5) Testing & Validation:

User Interface Testing:

❖ Record Types:-

We Created Record types in item object and labeled as “Gold” and “Silver”.

The screenshot shows the 'Object Manager' page for the 'Item' object in the Salesforce setup. The 'Record Types' tab is selected in the sidebar. There are two record types listed: 'Gold' and 'Silver'. Both are active and were modified by 'Kuruba Sirisha Team' on 26/02/2025 at 2:06 pm and 2:09 pm respectively. The 'Description' for 'Gold' is 'Gold items information' and for 'Silver' is 'Silver items information'.

RECORD TYPE LABEL	DESCRIPTION	ACTIVE	MODIFIED BY
Gold	Gold items information	✓	Kuruba Sirisha Team, 26/02/2025, 2:06 pm
Silver	Silver items information	✓	Kuruba Sirisha Team, 26/02/2025, 2:09 pm

★ **Permission Sets:** -

We created permission sets and labeled as “Per to Worker” and selected object permissions for “Read, Edit, Create”.

The screenshot shows the Salesforce Setup interface under the 'Permission Sets' section. A permission set named 'Per to Worker' is selected. The 'Permission Set Overview' section displays basic information: Description (Per to Worker), License (Standard), Session Activation Required (unchecked), Permission Set Groups Added To (0), API Name (Per_to_Worker), Namespace Prefix (empty), Created By (Kuruba Sirisha Team, 26/02/2025, 5:56 pm), and Last Modified By (Kuruba Sirisha Team, 26/02/2025, 10:17 am). The 'Apps' section lists various permission categories: Assigned Apps, Assigned Connected Apps, Object Settings, App.Permissions, Apex Class Access, and Visualforce Page Access.

The screenshot shows the 'Items' tab for the 'Per to Worker' permission set. Under 'Tab Settings', the 'Available' checkbox is checked and the 'Visible' checkbox is checked. In the 'Items: Record Type Assignments' section, 'Gold' and 'Silver*' record types are assigned to the 'Assigned Record Types' column. Under 'Object Permissions', the 'Enabled' status is checked for Read, Create, Edit, and Delete permissions.

The screenshot shows the Salesforce Setup interface with the 'Profiles' page open. The left sidebar shows navigation categories like 'Users', 'Data', 'Feature Settings', etc. The main content area is titled 'worker profile' under 'Profile Edit'. It includes fields for 'Name' (worker profile), 'User License' (Salesforce Platform), and 'Description'. The 'Custom Profile' checkbox is checked. Below this are sections for 'Custom App Settings' (with checkboxes for various studios and launchers), 'Service Provider Access', and 'Tab Settings' (with options for Home, Accounts, and All Sites). A note at the bottom right indicates required information.

This screenshot shows the same 'Profiles' page from the previous one, but with more expanded sections. The 'Custom Object Permissions' section is fully visible, showing permissions for various objects like 'Billings', 'Billing with Item and Customer orders', 'Billing', 'Orders', 'Items', 'Jewel Customers', 'Prices', and 'prices'. The 'Session Settings' section is also expanded, showing session timeout and security level settings. The bottom of the page shows the standard Windows taskbar with various application icons.

The screenshot shows a web browser window with multiple tabs open. The active tab is titled 'Permission Sets | Salesforce' and displays the 'Permission Sets' page. The page header includes a search bar labeled 'Search Setup' and a navigation bar with 'Setup', 'Home', and 'Object Manager'. A sidebar on the left contains a search bar with the query 'user adp' and a message stating 'No matching items found'. The main content area is titled 'Permission Set' and shows the 'Experience Profile Manager' permission set. It includes a 'Find Settings...' search bar and buttons for 'Clone', 'Edit Properties', 'Manage Assignments', and 'View Summary'. Below this, the 'Permission Set Overview' section provides details such as API Name (Experience_Profile_Manager), License (Salesforce), Namespace Prefix, Created By (Kuruba Sirisha Team, 20/02/2025, 10:28 am), and Last Modified By (Kuruba Sirisha Team, 28/02/2025, 10:17 am). The page also lists 'Apps' and their settings, including 'Assigned Apps', 'Assigned Connected Apps', 'Object Settings', 'App Permissions', 'Apex Class Access', and 'Visualforce Page Access'. The browser's address bar shows the URL: <https://ssgsdegreecollege-8e-dev-ed.develop.lightning.force.com/lightning/setup/PermSets/page?address=%2FOPSNS00006WefW>. The bottom of the screen shows the Windows taskbar with icons for File Explorer, Microsoft Edge, and other applications.

(6) Conclusion: -

CRM is a tool that allows businesses to manage relationships with their customers effectively. Customer Relationship management is a business strategy that enables a business organization to maximize revenue, customer satisfaction, and profitability through strategic mobilization, organization, and management of customer's interests and desires. BWM has traversed

numerous business challenges that made it establish a CRM that will foster customer relationship as a baseline for market strengthening and diversification. BMW has diversified its market in various global markets through the initiation of the CRM systems. The system has significantly contributed to the company's financial, operational, managerial and development initiatives with a robust customer relationship that has fostered great sales of its product. Mercedes Benz operates a similar customer relationship management system just BMW and due to market power, the company has its customer roots to various market bases. Mercedes has majored in customer-dealership business relationships. This has provided the company with strategic mechanization of customer retention, satisfaction and purchase behavior enhancing the company's profitability through an increased purchase command. The two companies are among the leading CRM implementers in automotive.

CRM system is critical for jewelry businesses, allowing them to effectively manage customer relationships by centralizing data, enabling personalized interactions, optimizing sales processes, and gaining valuable insights into customer behavior, ultimately leading to increased sales, improved customer loyalty, and a more streamlined business operation through tailored marketing strategies and exceptional customer service.

A CRM (Customer Relationship Management) system for jewelers is essential for managing customer relationships, enhancing sales, and improving overall business efficiency.

Jewelry businesses face a multitude of challenges, from fierce competition to changing consumer preferences and limited budgets for marketing and advertising. It can be a tough market to navigate, but the good news is that implementing a customer relationship management (CRM) system can help overcome many of these challenges.

One of the biggest challenges facing jewelry businesses is the need to stay relevant and top of mind with customers. With so many options available, consumers are easily distracted and can quickly forget about your brand. A CRM system can help you stay top of mind by enabling you to communicate with

customers on a regular basis and provide personalized recommendations based on their preferences.

Another challenge is managing inventory and ensuring that you have the right products available at the right time. A CRM system can help you keep track of inventory levels and alert you when products are running low or need to be restocked. This can help you avoid lost sales due to out-of-stock items and ensure that you always have a variety of products available to meet customer demand.

Finally, jewelry businesses face the challenge of attracting new customers and retaining existing ones. A CRM system can help you identify customer segments and target them with personalized marketing messages that resonate with their specific interests and preferences.
